FIRE EXTINGUISHER

Remember P.A.S.S.

P — PULL the Pin

Hold the extinguisher upright. Pull the pin, breaking the tamper seal.

A — AIM at Base of Fire

Point at the base of the fire, not the flames. Start back from the fire as the label directs. Stay low if there is smoke.

S — SQUEEZE the Handle

Squeeze the handle to discharge. Release to stop.

S — SWEEP Side to Side

Sweep side to side at the base of the fire and move in as it goes out. Watch for re-ignition.

⚠ Fight a fire only if it is small (wastebasket size), you have the right extinguisher, your escape route is behind you, the room is not filling with smoke and you are trained.
If in doubt, get out and call 911.

i Know Your Extinguisher Classes

A - Ordinary combustibles (wood, paper) | **B** - Flammable liquids (gas, oil) | **C** - Electrical equipment | **D** - Combustible metals | **K** - Cooking oils/fats
